PROFESSIONAL SUMMARY

Detail-oriented Information Technology student with hands-on experience troubleshooting computers, testing software workflows, building web applications, maintaining technical records, and assisting clients with technology issues. Skilled in Windows diagnostics, web development, databases, API and backend tools, documentation, issue tracking, and post-change verification. Brings structured problem solving, clear communication, and a fast-learning approach to software and IT support.

IT SOFTWARE SUPPORT AND SYSTEMS STRENGTHS

- Software troubleshooting and issue isolation
 - Windows and PC diagnostics
 - Technical documentation and user assistance

Orchestra Communications
Data Researcher Intern

 - Built prospect lists by researching company and contact information across multiple online sources, then entering findings into organized, searchable records.
 - Compared multiple sources, verified fields, and flagged missing or conflicting information before team use.
 - Standardized field names and formats to keep records consistent and easier to review or update.
 - Applied a repeatable validation workflow to manage recurring assignments accurately and keep outputs organized for team review.
 - Reviewed completed records for completeness and usability, helping limit rework and clarification needs.
 - Maintained source context and communicated data gaps clearly so follow-up actions were visible to the team.
- Web application development and testing
 - Database and record management
 - Structured problem solving and follow-through

June 2025 - October 2025

- Di Ba I.T Ka Computer Services (Freelance)**
Computer Technician

 - Coordinate client service requests and updates from intake through device release, maintaining records, quotations, schedules, and supporting documentation.
 - Clarify device issues and required next steps, respond to client questions, and explain findings clearly to support informed decisions.
 - Track multiple repair tasks through status updates and structured testing, recording findings and verifying completed work.
 - Prepare clear service notes and follow-up updates to support timely resolution and consistent customer communication.
 - Maintain a clear queue of active and pending service requests, prioritizing next actions as repair status changes.
 - Perform final checks before device release and document test results to support accurate handoff and reduce repeat clarification.
 - Explain technical findings in clear, non-technical language and confirm next steps with clients before service continuation.
- July 2025 - Present**

- Eyalcon Trade Consulting LTD. Co.**
CCTV Monitoring Operator

 - Monitored activity across 20+ locations and identified concerns requiring verification, escalation, or follow-up.
 - Handled client and onsite inquiries by clarifying issues and communicating prompt, professional updates.
 - Coordinated with clients, onsite personnel, security staff, and workers to clarify incidents and support timely resolution.
 - Recorded pending concerns, shift context, and unresolved matters to support accurate handover between responsible personnel.
 - Escalated exceptions through established channels and tracked status until required follow-up was visible.
 - Worked independently in a fast-paced monitoring environment while adapting to changing priorities.
 - Prepared clear handover notes so incoming personnel could quickly see open incidents, required actions, and status changes.
 - Maintained calm, professional communication during time-sensitive incidents and adjusted updates for clients, workers, and onsite personnel.
- June 2026 - September 2026**

TECHNICAL SKILLS

- Development:** JavaScript, TypeScript, Python, C++, Java, React, Vite

Testing/Support: Structured testing, validation, troubleshooting, post-change verification, Windows diagnostics

Office/Productivity: Microsoft Word, Excel, Google Sheets, file organization, structured documentation

Technical Records: Data entry, record maintenance, anomaly checks, source validation, searchable records
- Backend/Data:** Node.js, Express.js, FastAPI, Supabase, PostgreSQL, MySQL, MongoDB

IT Support: Windows reinstallation, driver issues, malware cleanup, upgrades, basic networking

Systems/Tools: Git, GitHub, GitHub Actions, Vercel, web-based tools, workflow documentation

User Assistance: Client support, issue explanation, escalation, follow-up, clear technical communication

SELECTED PROJECT EXPERIENCE

- Woodberry Resort and Events Booking System**
Lead Developer | Astro, React, TypeScript, Supabase, Tailwind CSS, Vercel

 - Led primarily frontend execution across a team-built resort and events booking system, translating operational requirements into customer, staff, and administrator workflows.
 - Built web forms and dashboards for reservations, availability, packages and venues, payments, notifications, and booking status tracking.
 - Contributed to validation, storage, audit history, role-based operations, and organized records supporting accurate booking workflows.
 - Created administrator-facing forms and status views that kept reservation details, notifications, and pending actions organized in one workflow.
- Lost and Found Website**
Sole Developer | Astro, React, Tailwind CSS, Supabase, Vercel

 - Built and maintained a responsive web platform with organized records, database integration, deployment, and Git/GitHub workflow.
 - Structured database-backed item records to support consistent submissions, updates, and review of reported items.
